

Branch Creek®

EVOLUTION GRASS SEED

Improve weed and disease control -
Promote Regeneration.

HIGHLIGHTS

- Paleo Seed Treatment increases germination rate and speed by up to 30% and without the addition of a high phosphorus starter fertilizer. Increases root establishment by up to 60%.
- Meets the standard of A-List® approved by the Alliance For Low Input Sustainable Turf. A-List® approval requires testing and verification for the reduced need for water, pesticides and fertilizers. Learn more at a-listturf.org.
- The A-List® seed used in Evolution needs 35% less water compared to other seed cultivars allowing for a reduction in water usage by 55,172 gallons per year.
- Improve weed control by utilizing seed varieties that are designed to crowd out weeds by providing lateral movement as well as large root systems.
- Multiple species of grasses increases diversity in the soil biome and promotes regeneration.
- Early rhizome development and aggressive tillering allow for fill in of bare spots
- Naturally occurring endophytes provide surface feeding insect control
- Thrives in full sun or up to 70% shade
- Superior Brown Patch Resistance
- Non-GMO
- Blue-Tag Certified

PLANT WITH CONFIDENCE

A-LIST APPROVED

This turfgrass product has been approved by the Alliance for Low Input Sustainable Turf (A-List). Independently evaluated in diverse environments, this product has proven to be more sustainable and excels in several categories.
